

SKIN CANCER MEDICINE

ALSO AVAILABLE ONLINE

WWW.HEALTHCERT.COM/SCMED1

Skin cancer is one of the most common dermatological conditions seen in Australian general practice – and it is not overly complex to manage if you have the right skill set. Due to a lack of dermatologists, general practitioners play a vital role in managing the skin cancer epidemic and providing effective care to patients with skin cancer concerns.

This program will not only give you the knowledge required to safely and confidently diagnose and treat the vast majority of skin lesions, but it will also help grow your practice and increase your revenue. The Professional Certificate of Skin Cancer Medicine offers the ideal starting point for building your core knowledge, and the Advanced Certificate and Professional Diploma courses will increase your confidence in dermoscopy, surgical and non-surgical treatments.

If you ever look at skin lesions in your practice, you must do these courses. You can't do any skin cancer medicine in general practice without this information.

– Dr S. Southgate, WA –

Don't miss this program! It's interesting, practical, and enjoyable. After attending courses for 30 years, I rank this as number one.

– Dr P. Laundy, WA –

PRESENTERS

Prof David Wilkinson
Macquarie University

FURTHER STUDIES

Upon completion of the program, graduates receive automatic RPL for the unit IMED7010 of the Graduate Certificate of Medicine (Skin Cancer) which is the first step in the Master of Medicine (Skin Cancer) at The University of Queensland. Course graduates can also apply for Accreditation of Prior Certified Learning (APCL) for module 3 of the Postgraduate Diploma in Dermatology studied through the Rila Institute of Health Sciences and awarded by the University of Plymouth (UK). To gain more hands-on experience, course graduates are encouraged to complete a clinical attachment at a dedicated skin cancer facility.
